

Success Story: Healthcare Facility Compliance Management – ISO 27001 and HIPAA

Situation

The CLIENT is one of the three premier medical clinics in the World providing the highest quality cancer and cardiac treatment.

The Engagement

Orange Parachute consultants worked closely with Client staff to develop and implement an information security risk assessment methodology to address the federally mandated HIPAA requirement for an information security risk assessment.

The Approach

Orange Parachute consultants met with Client's security management staff to determine the scope of the work that would be most effective across this very large and diverse healthcare organization. This resulted in a two week scoping engagement that provided them with an accurate and achievable statement of work for an institution-wide HIPAA risk assessment based on the foundation of the ISO 27001 information security standard.

The Result

The risk assessment project resulted in a Risk Assessment tool and methodology that not only identified and quantified risks to electronic protected health information, but also provided a model for ongoing re-assessment and evaluation of progress toward continuous process improvement.
